Document information

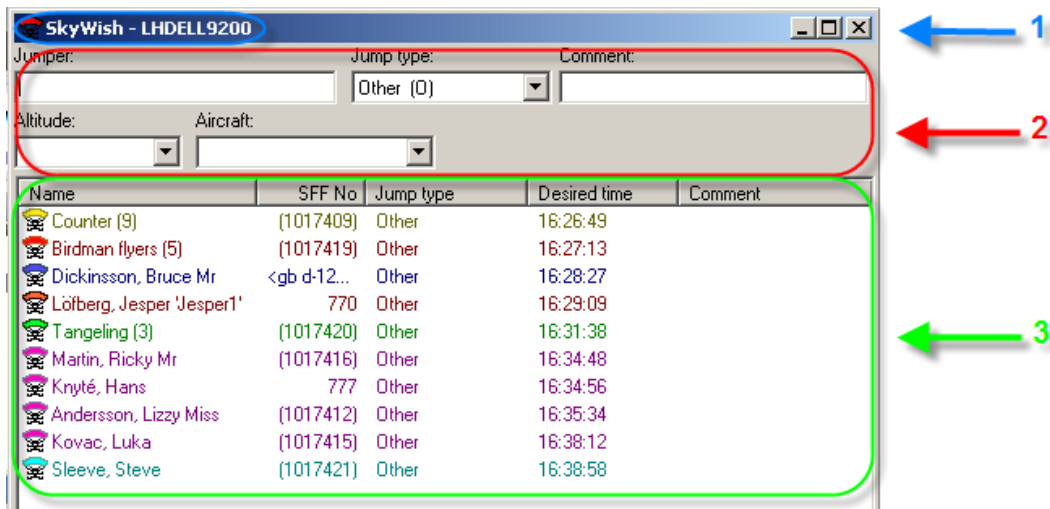

This document is intended for jumpers who would like to use **SkyWish** to manifest jumps.

Revision history

<i>Date</i>	<i>Version</i>	<i>Description</i>	<i>Author</i>
20 March 2010	9.04	Published together with release of SkyWin 9.0.4	Jesper Löfberg

Information in SkyWish

1. Title

The name of the computer will be shown here. If more than one computer is running *SkyWish* the user in *SkyWin* can see which computer each jumper has used.

2. Search attributes

The search attribute ***Jumper*** is used to search jumper or group. The other search attributes can be used after the search, to express complementary wishes for the jumper.

3. Wish list

This is the list of jumpers manifested from this computer only. When jumpers are dedicated to a specific load, they will disappear from this list.

Coloring

Each individual color has no significant meaning, other than to show which jumpers are manifested together. In this example you can see 7 different colors, thus 7 different groups (although many of the 'groups' consist of one jumper only).

SkyWish user manual

Enter search criteria

For all types of jumps the same procedure is used for searching and entering.

1. Use the attribute *Jumper* for search criteria like **name**, **member number**, **nickname**. For groups, use the name of the group.
If *SkyWish* finds more than one jumper or group matching the search criteria, a list with all matches will be shown. Press **Tab** if you just want to search, before entering the jumper.
Press **Enter** to search and enter directly without changing the other attributes.
2. Choose the type of jump if proposed type is incorrect.
3. You can enter **Comment**, **Altitude** and **Aircraft**. These attributes can also be left empty
4. Press **Enter**.

Name	SFF No	Jump type	Desired time	Comment
Counter (9)	(1017409)	Other	16:26:49	
Birdman flyers (5)	(1017419)	Other	16:27:13	
Dickinson, Bruce Mr	<gb d-12...	Other	16:28:27	

Manifest a single jumper

Enter search criteria and press **Enter**, the jumper will be manifested on the wish list.

Manifest a student

When search criteria for a student are entered, *SkyWish* will recognize that and show an extra form for completing student details.

Student jump

Jumper: Sample, John Mr

Jump: 2 Static line program

Stable freerail. Dummy.

Altitude: 3500

Deployment altitude: 3500

Jump type: Static line (S)

Canopy:

Manifest existing SkyWin groups

Groups in *SkyWin* can be manifested as simple as a single jumper. Enter the name of the group and *SkyWish* will manifest the group on the wish list showing both name and the number of jumpers in the group within parenthesis.

The screenshot shows the SkyWish application window titled "SkyWish - LHDELL9200". It features a form with fields for "Jumper:", "Jump type:" (set to "Other (0)"), "Comment:", "Altitude:", and "Aircraft:". Below the form is a table with the following data:

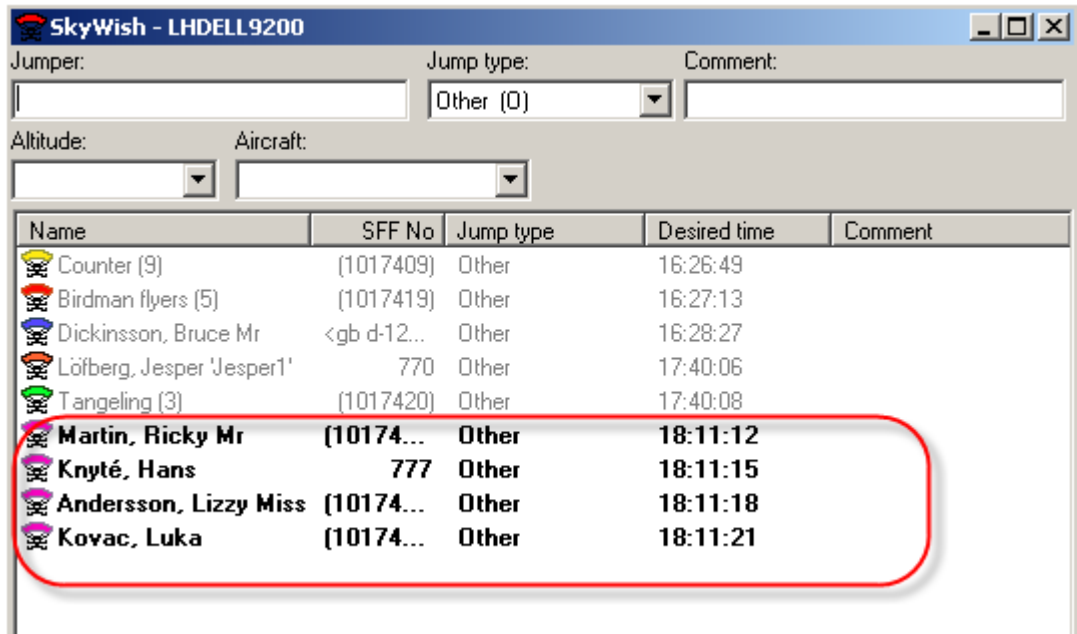

Name	SFF No	Jump type	Desired time	Comment
Counter (9)	(1017409)	Other	16:26:49	
Birdman flyers (5)	(1017419)	Other	16:27:13	
Dickinson, Bruce Mr	<gb d-12...	Other	16:28:27	
Løfberg, Jesper 'Jesper1'	770	Other	17:40:06	
Tangeling (3)	(1017420)	Other	17:40:08	

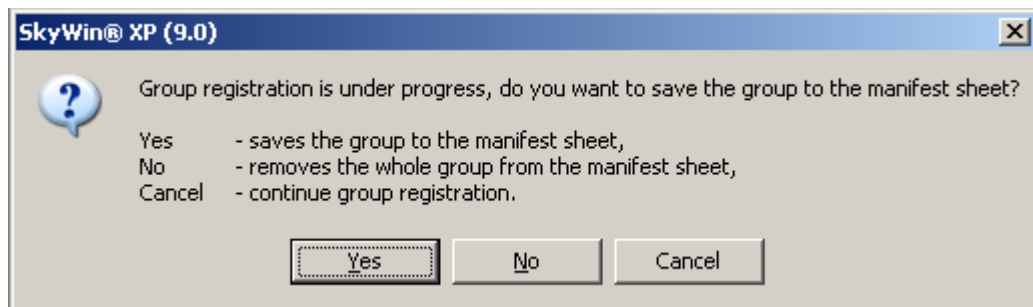

SkyWish user manual

Manifest jumpers as a group

SkyWish can also manifest jumpers as a group on the wish list. If jumpers are manifested within the time limit, 15 seconds¹, they will be manifested together as a group. A group registration on the wish list that is in progress is marked with bold.

After 15 seconds of inactivity the group will be saved automatically. If you wish to save the group manually, just press **Enter** without any search criteria, after the last jumper in the group, and you will be presented with a confirmation dialog.

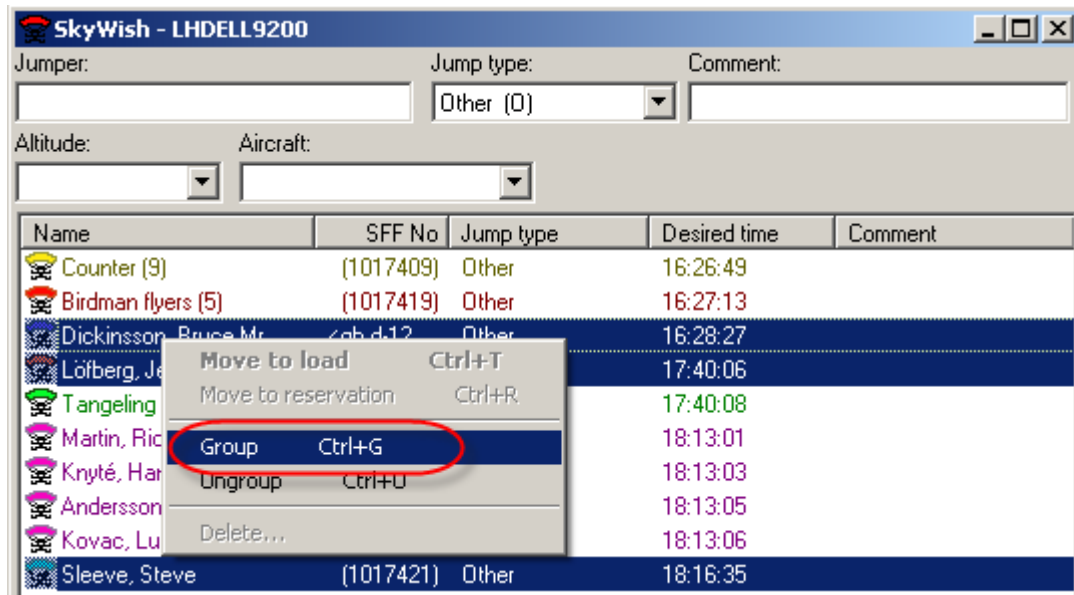

¹ The time limit is configurable *File | Options | Manifest*

Other functions

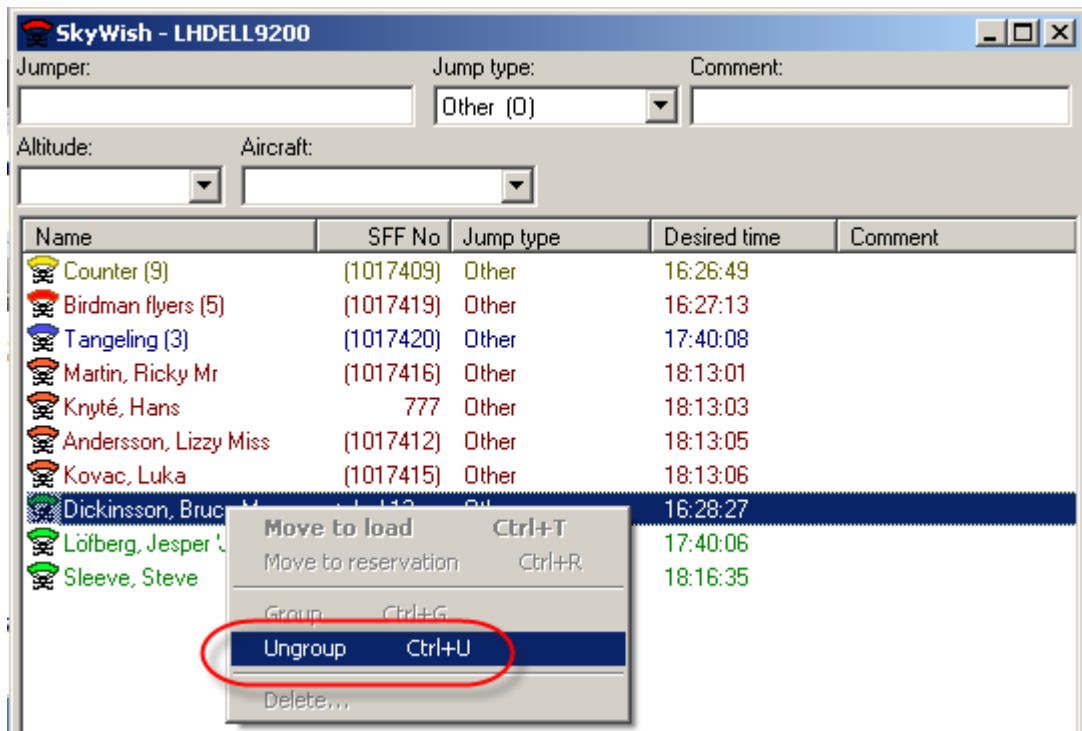

Group jumpers on the wish list

You can group jumpers already on the wish list by marking them, right-click and select **Group**.

Ungroup jumpers on the wish list

To remove jumper(s) from a group on the wish list, mark jumper(s), right-click and select **Ungroup**. The jumper(s) will remain on the wish list as single jumper.

SkyWish user manual

Remove jumpers from the wish list

Removal of manifested jumper cannot be done in *SkyWish*, this must be done in *SkyWin*.
